
SEMINARIO DE ANÁLISIS NUMÉRICO Y MODELACIÓN MATEMÁTICA

GIMNAP-Departamento de Matemática, UBB
Centro de Investigación en Ingeniería Matemática (CI²MA), UDEC

Expositor:

Mauricio Sepúlveda

CI²MA y Departamento de Ingeniería Matemática, UdeC

Título de la Charla:

*A virtual element method for a nonlocal
FitzHugh-Nagumo model of cardiac electrophysiology*

Fecha y Hora:

Martes 10 de Noviembre de 2020, 15:30 Horas.

Lugar:

Seminario online

Plataforma Zoom

Resumen

We present a virtual element method (VEM) for a nonlocal reaction-diffusion system of the cardiac electric field. To this system, we analyze an H^1 -conforming discretization by means of VEM which can make use of general polygonal meshes. Under standard assumptions on the computational domain, we establish the convergence of the discrete solution by considering a series of a priori estimates and by using a general L^p compactness criterion. Moreover, we obtain optimal order space-time error estimates in the L^2 norm. Finally, we report some numerical tests supporting the theoretical results.
