
SEMINARIO DE ANÁLISIS NUMÉRICO Y MODELACIÓN MATEMÁTICA

GIMNAP-Departamento de Matemática, UBB
Centro de Investigación en Ingeniería Matemática (CI²MA), UDEC

Expositor:

Pablo Venegas

Departamento de Matemática, UBB.

Título de la Charla:

Optimal Control of Magnetic Nanoparticles.

Fecha y Hora:

Martes 26 de Abril de 2016, 15:30 Horas.

Lugar:

Sala Seminario, Facultad de Ciencias

Universidad del Bío-Bío.

Resumen

Magnetic drug targeting is an important application of ferrofluids where drugs, with ferromagnetic particles in suspension, are injected into the blood stream. The external magnetic field thus concentrates the drug to the most affected areas, for example, solid tumors. Current approaches lack a proper functional analytic framework which is essential to formulate optimization problems and develop stable numerics, both being crucial in practice. In this work we formulate a PDE constrained optimization problem with a tracking type cost. We develop an adjoint based optimization framework with a state equation consisting of an advection-diffusion equation for the concentration. The solenoidal and irrotational magnetic field acts as a control. Its multiplicative nature is a new and major issue in PDE constrained optimization.
